

DunkFloor – Lebanese Street Basketball Platform

Prepared by: Rawan Jamal

ID: 52510031

Course: CSCI390 – Web Programming

Instructor: Ahmad Trad

1. Introduction

DunkFloor is a modern website designed to represent Lebanese street basketball culture. The platform connects La3ibe (players) and Mal3ab (courts) in a structured and simple way.

2. Project Concept

DunkFloor is not just a website, but a representation of Lebanese street basketball culture. It reflects real environments where basketball is played and connects players and courts through a simple digital platform.

3. Objectives

- Design a clean and modern website using dark theme.
- Organize content into clear pages.
- Provide smooth navigation.
- Ensure responsiveness across devices.

4. Technologies Used

- HTML for structure.
- CSS for styling.
- Responsive Design using Flexbox, Grid, Media Queries.

5. Website Structure

Home Page: Introduction and navigation.

About Page: Explains concept and identity.

Services Page: Displays structured data.

Contact Page: User interaction form.

6. User Experience

The website is designed to be simple and easy to use. Clear navigation and structured layout improve usability and readability.

7. Design Decisions

A dark theme was used to reflect street basketball atmosphere. Orange color highlights important elements.

8. Challenges

- Layout alignment issues.
- Responsive design adjustments.
- Spacing and consistency improvements.

9. Code Explanation

HTML is used for structure. CSS is used for styling and layout. Flexbox and Grid are used for responsive design.

10. Conclusion

DunkFloor demonstrates understanding of web design using HTML and CSS, with focus on structure, design, and usability.

11. Future Improvements

- Add user accounts.
- Add ratings.
- Improve animations.
